1. Introduction

This section gives a scope description and overview of everything included in this document. Also, the purpose for this document is described and a list of abbreviations and definitions is provided.

1.1 Purpose

The purpose of this document is to present a detailed description of the Students Center project. It will explain the purpose and features of the website, the interfaces of the website, what the user will do.

1.2 Scope

The “Students Center” is a Web based platform which helps students to find any kind of study related information and solutions.

This website is designed to assist the students by providing tools to do following activist:

- a. Easily a student can find all kind of information for admission by College or University name, GPA, SAT, ACT, GRE, STATE or ZIP code.
- b. Able to know college or universities tuition fees, funding, and availability of scholarship.
- c. Can find counselor information by Name, STATE or ZIP code. Also make appointment with counselor.
- d. Can find list of universities by state.
- e. Able to know everything about all types of Standardized Test.
- f. Can discuss any kind of problem with other students or counselor through Students Forum.
- g. Students, parents or counselor can give their feedback to improve Students Center supports by survey feature.
- h. Able to contact with Students Center team via live chat or contact form.
- i. Sell or buy study materials.
- j. Get free tutorials.
- k. Get free eBooks.

In addition, Colleges and universities admission Centre can add their college or university information to our database. Also counselor can add their contact details to the database.

1.3 Definitions, acronyms, and abbreviations

Term	Definition
User	A user can be a student, counselor and parents.
Admin/Administrator	Students center team members are the part of Admin. College and counselor can add their specific information through our administrative panel added in the website. [1]
Xampp	XAMPP Apache + MariaDB + PHP + Perl. Xampp in an open source cross-platform web server solution stack package, interpreters for scripts written in the PHP and Perl programming languages, and is use to create MySQL database. [2]
Brackets	An open source code editor for web designers and front-end developers. [3]
HTML	HyperText Markup Language (HTML) is the standard markup language for creating web pages and web applications. [4(a)]
CSS	Cascading Style Sheets (CSS) describes how HTML elements are to be displayed on screen, paper, or in other media. [4(b)]
JavaScript	To build interactive websites. [4(c)]
PHP	PHP is a server scripting language, and a powerful tool for making dynamic and interactive Web pages. [4(d)]
MySQL	MySQL is the most popular database system used with PHP. [4(e)]
Ajax	Asynchronous JavaScript and XML (Ajax) allows web pages to be updated asynchronously by exchanging small amounts of data with the server behind the scenes. This means that it is possible to update web page without loading. [4(f)]
jQuery	jQuery is a fast, small, and feature-rich JavaScript library. [5]
Bootstrap	To create one framework for every device. [6]
FireFTP	FireFTP is a free, secure, cross-platform FTP/SFTP client for Mozilla Firefox which provides easy and intuitive access to FTP/SFTP servers. [7]

1.5 Overview

The next chapter, the Overall Description section, of this document gives an overview of the functionality of the product. It describes the informal requirements and is used to establish a context for the technical requirements specification in the next chapter.

The third chapter, Requirements Specification section, of this document is written for the developers and describes in technical terms the details of the functionality of the product.

2. Overall description

This section will give an overview of the whole website.

2.1 Product perspective

This website consist of seven parts shown in diagram (Figure 1). We will discuss each use case of each part in the next section.

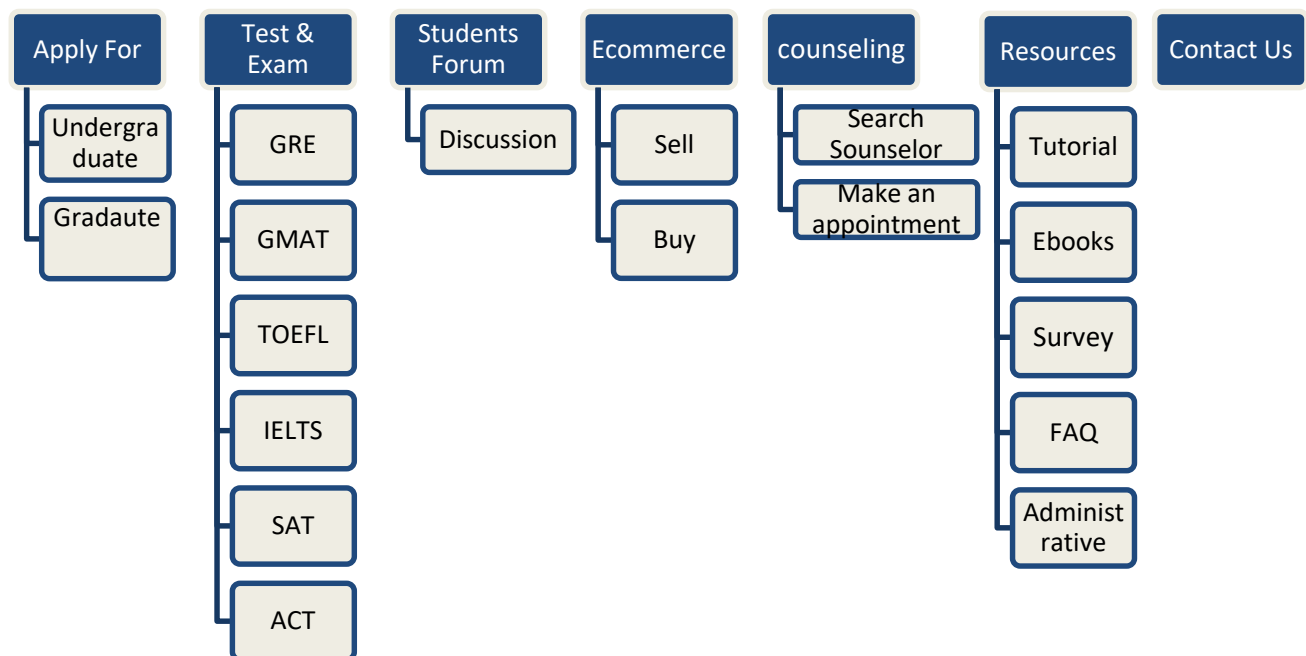

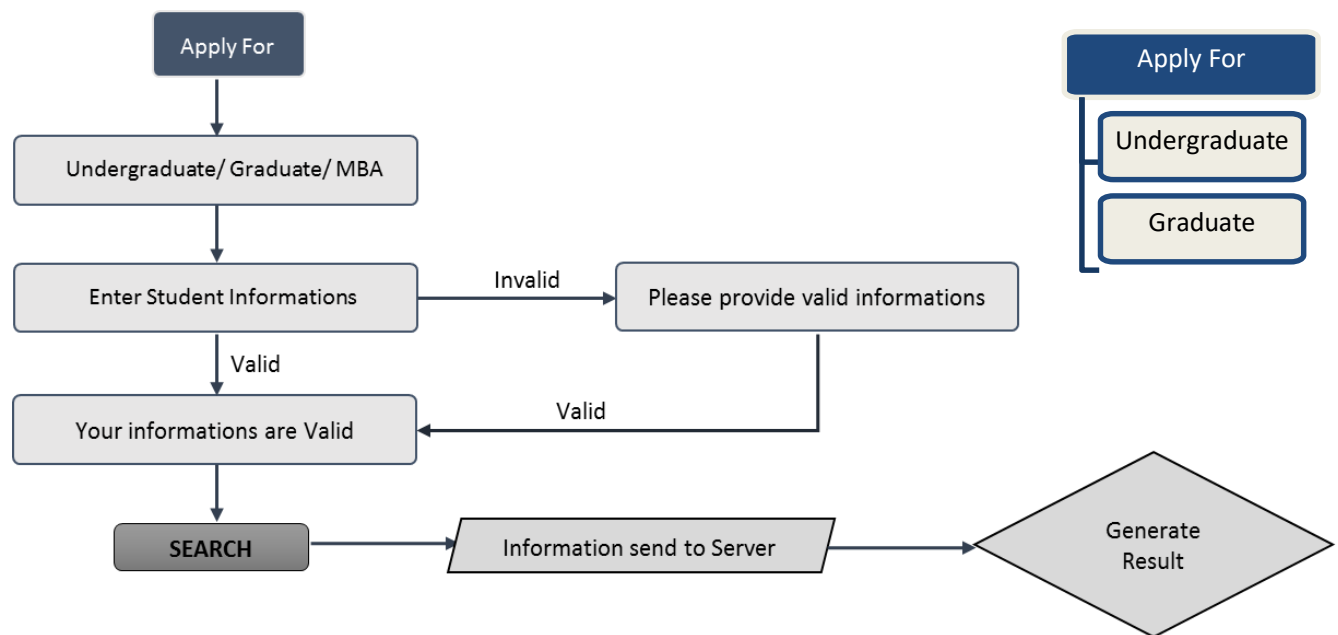

Figure: Diagram of Students Center Website

2.2 Software Requirements Specification

This section outlines the use cases for each of the website section separately. The apply for, the test and exam, students forum, ecommerce, counselling and contact us.

2.2.1 Apply For

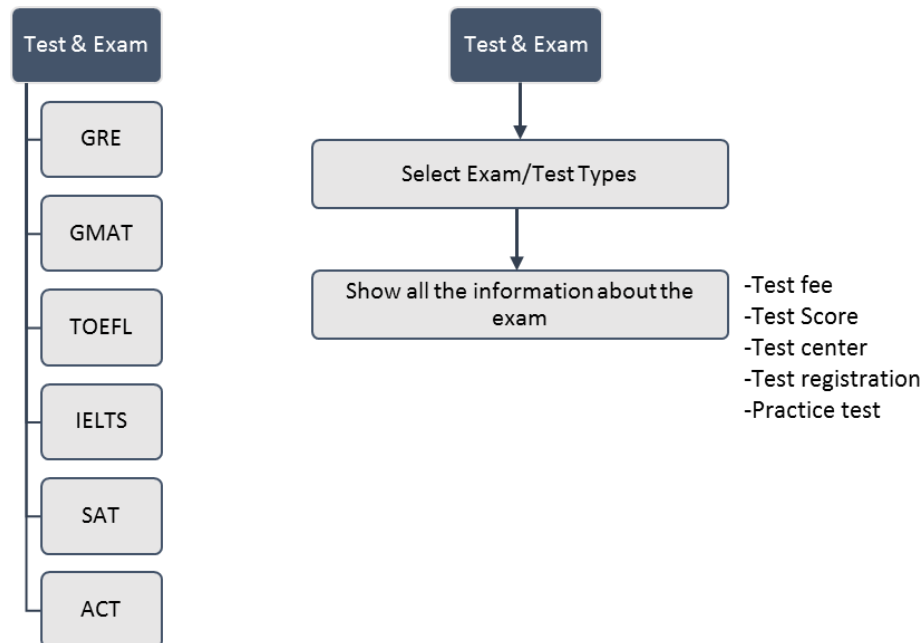

Apply for Use Case diagram:

Brief Description: Upcoming undergraduate and graduate students can enter their information's like GPA, SAT, ACT, GRE Score, preferred state. The system will verify the validity of the information. If invalid information's were entered, system will tell you "Please provide the valid information's". Then if user press the Search button, information's will be sent to server. Matching information's will be generated from the server and displayed to the user.

2.2.2 Test and Exam

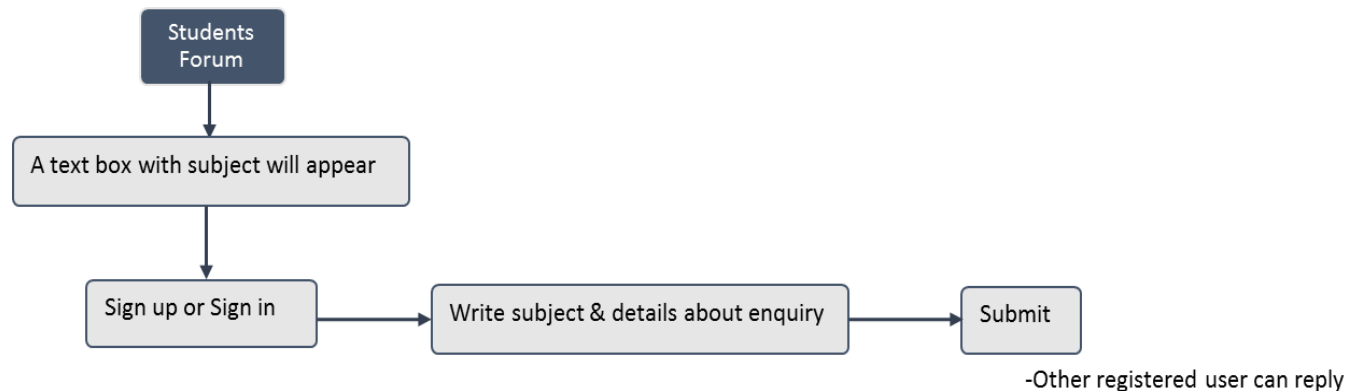

Test and Exam Use Case diagram:

Brief Description: Students will be able to know details about different types Standardized Test such as test fee, test score, test center, test registration. Students also can participate in free practice test.

2.2.3 Students Forum

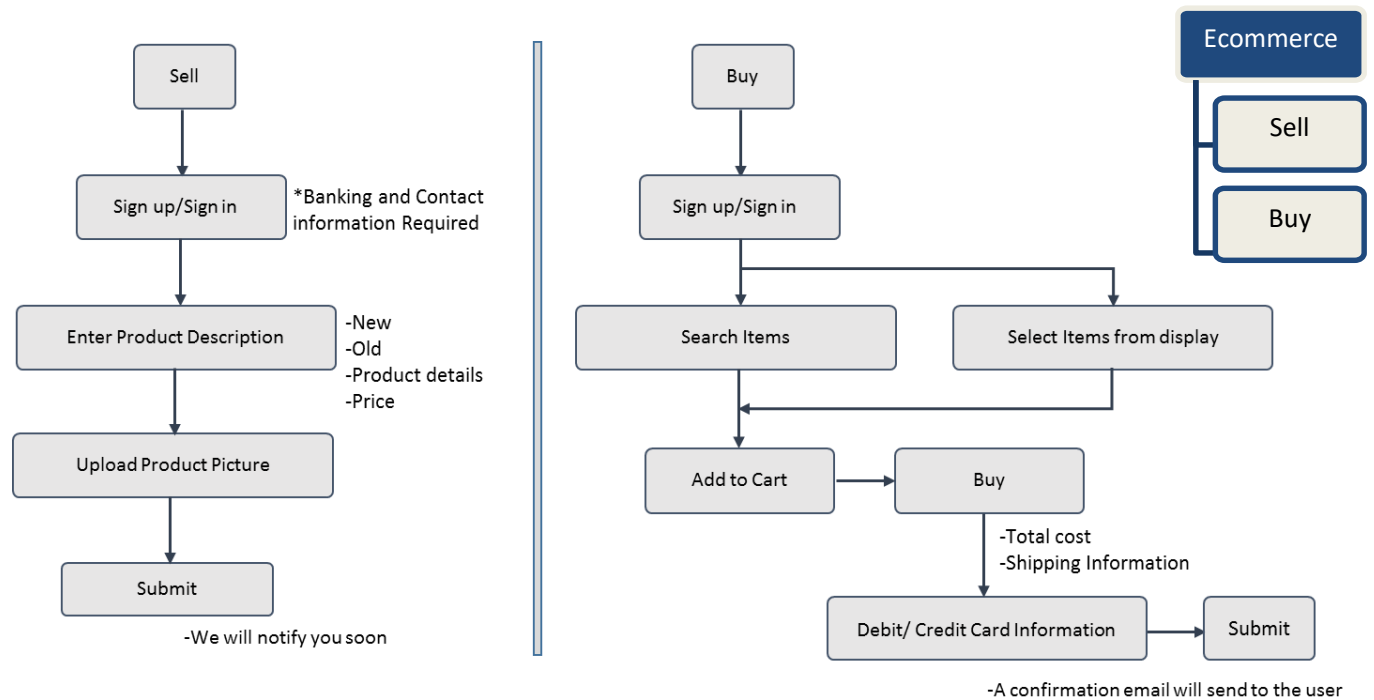

Students Forum Use Case diagram:

Brief Description: In Students Forum students will see a text box with subject where they can write their questions. To do that they need to be a registered user. Other registered user can reply to their questions.

2.2.4 Ecommerce

Ecommerce Use Case diagram:

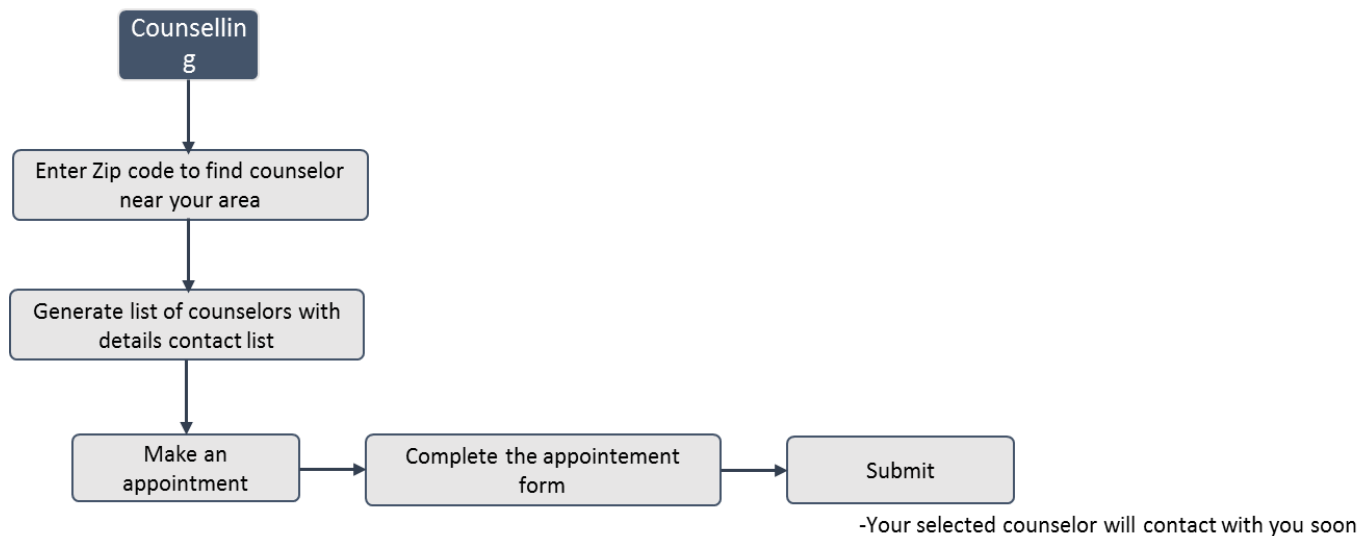

Brief Description:

Sell: To sell a product user need to be a registered user. After sign in user have to provide product details like the product is new or old, edition and author if books, price etc. Then user need to upload at least a picture of the product. After submitting the product details user will get an email that he or she will be notified if someone wants to buy the product.

Buy: To buy a product user also need to be a registered user. After sign in user can search item by name or select items from display. Then press add to cart. After that when user press Buy button system will ask user to provide Shipping information and Debit/ Credit card information. After submitting all the information system will send a confirmation email to the user.

2.2.5 Counselling

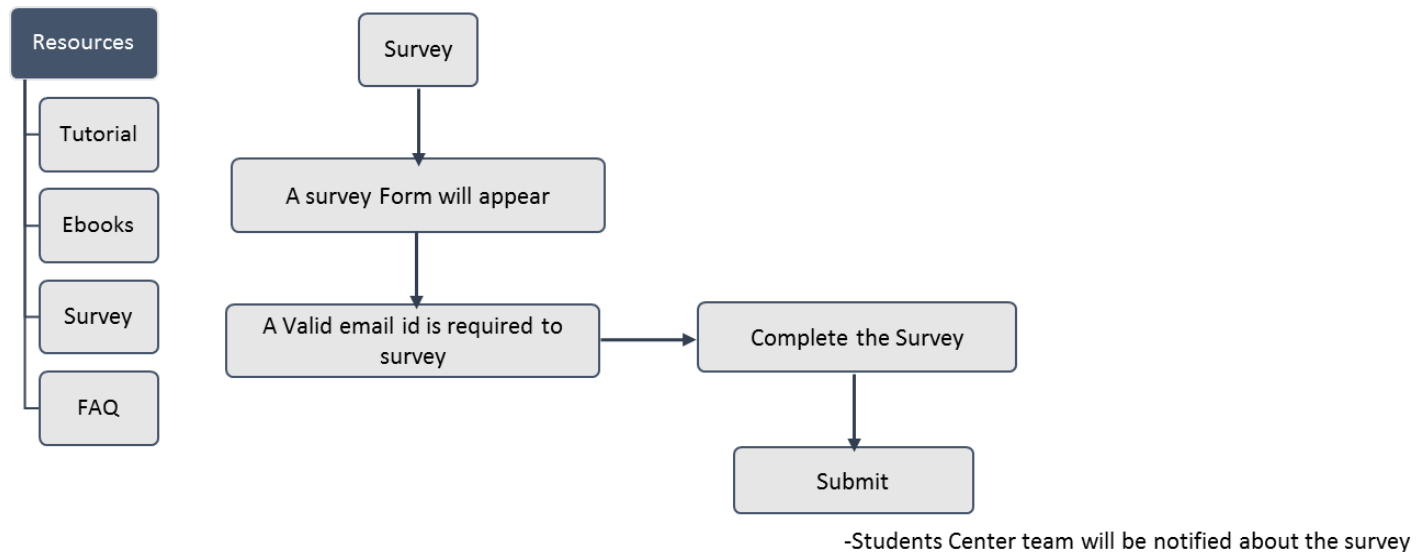

Counselling Use Case diagram:

Brief Description: User can find counselors information by ZIP code near his/her area, and make appointment with counselor.

2.2.6 Resources

Resources Use Case diagram:

Brief Description:

Tutorial: Students can find video tutorials by subjects.

EBooks: Students can download different standardized test free eBooks.

Survey: Students, parents or counselor can give their feedback to Students Center Team. [Link](#)

2.2.7 Contact Us

Contact Us Use Case diagram:

Contact Us

Head of the Student Center - Success Begins Today
 160 Convent Ave, New York, NY 10031
 Tel: +1 212-650-7000

**Please fill out the form below
and we will contact you shortly:**

Send

Brief Description: User can contact with Students Center team by filling out the above form.

3. Update Information

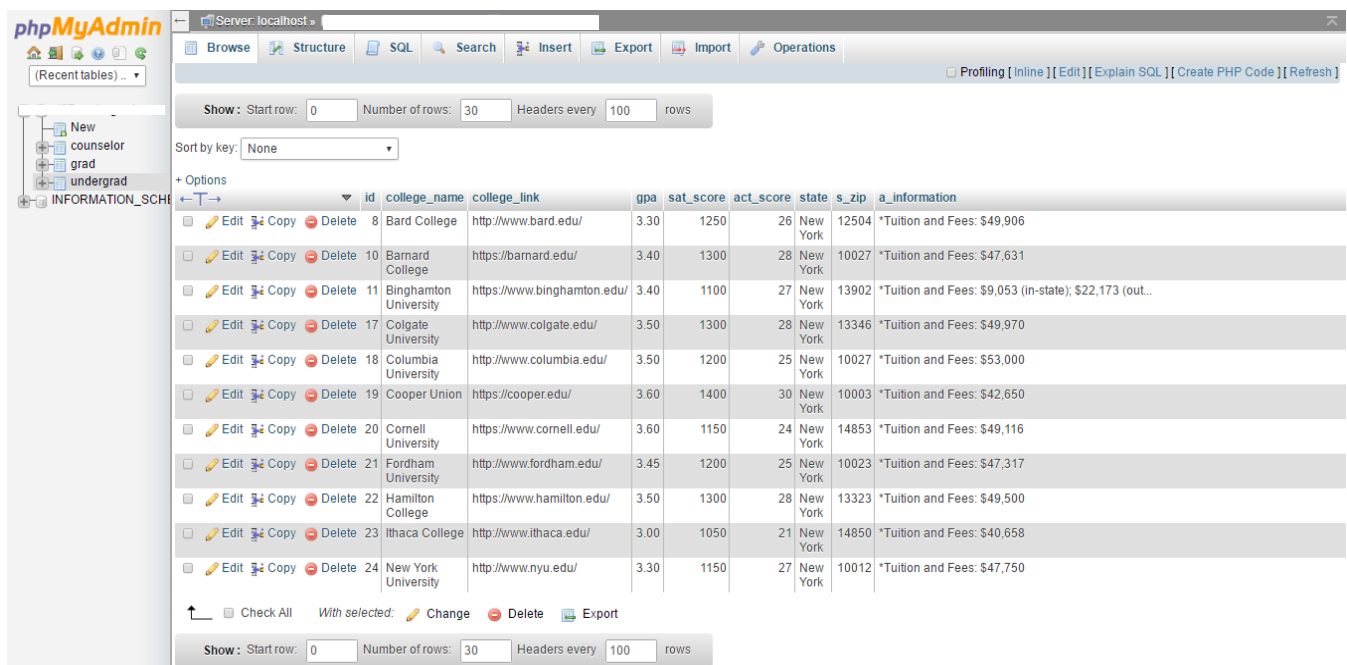

We completely redesigned the Apply For section and Counselling Section. We will discuss briefly about those changes in this chapter.

3.1.1 Necessary Tools and Programming Language

- Xampp Apache Server- To create MySQL database in localhost and php server scripting.
- Editor- Brackets
- Html, CSS, Javascript
- Bootstrap- To create one framework for every device.
- Ajax and jQuery- To show results without loading
- FireFTP- To transfer php files from localhost to public host.

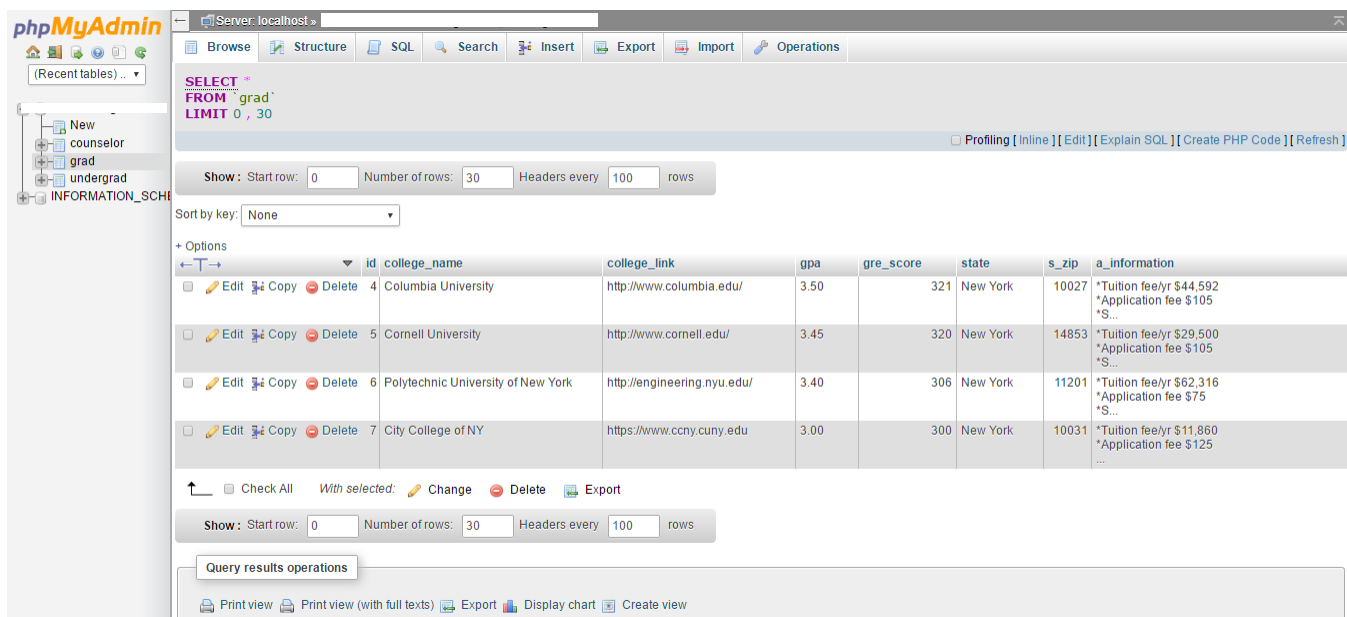

3.1.2 MySQL database

We created three different My SQL database. One for upcoming undergraduate students, one for upcoming graduate students and another for counselor.

Figure: Database for Upcoming Graduate Students

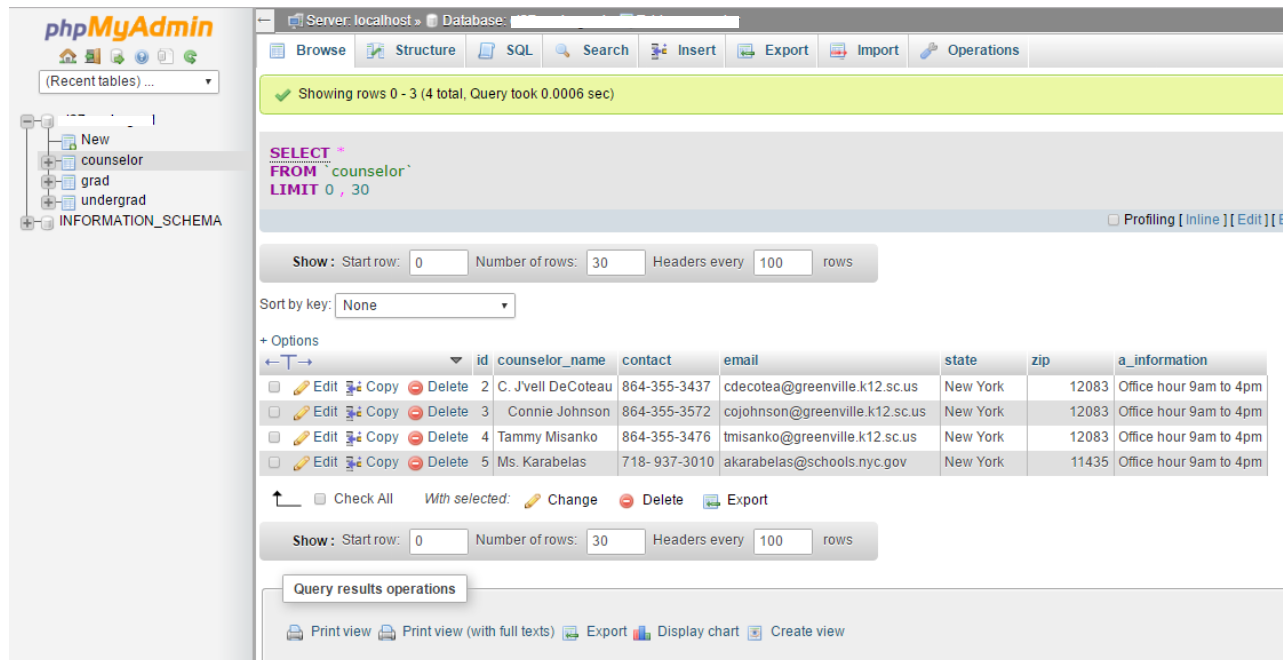

Figure: Database for Counselor

3.1.3 Insert information's to database

There are 3,026 four-year institutions and 1,700 two-year institutions in the USA. Of these, 1,623 schools are public and 3,103 are private; of the private schools, 1,451 are for-profit. There are 3,275 nonprofit public and private institutions of higher learning in the United States.

According to Bureau of Labor Statistics in 2014 there were 273,400 jobs employment for School Counselor.

According to all the above information's it is really hard to amalgamate all the colleges and counselor information's to Students Center team. That's why we made three different insert data to MySQL php server script so that college or universities and counselor can add their information's. Only colleges and counselors can access those pages from website Administrative panel.

Add Your College Information

College Name	<input type="text" value="Enter College or University name"/>
College Link	<input type="text" value="Enter College or University link"/>
GPA	<input type="text" value="Enter GPA required"/>

Figure: Type College name or GPA or SAT or ACT or State or Zip In the search box

Similarly for upcoming graduate students admission information's and counselor's information's can be added to the database and then students will be able to can find those information's.

3.1.4 Search Colleges and Universities for apply

Now upcoming undergraduate or graduate students can search any college or university information by College Name or GPA or SAT Score or ACT Score or STATE or ZIP Code. They don't need to enter many information's and don't need to wait for loading. Just type and they will get the instant result.

Search Colleges and Universities

Search new york

College Name	College Link	GPA	SAT Score	ACT SCORE	State	ZIP Code	Additional Information

4. Coding

We did the following web development coding for adding data into MySQL database and to find the colleges and counselor information's.

4.1.1 Insert information's to MySQL database (Undergraduate, Graduate, Counselor)

File name: insert_college.php

```
<!DOCTYPE html>

<html>
  <head>

    <title>Undergraduate</title>

    <link rel="stylesheet"
href="https://maxcdn.bootstrapcdn.com/bootstrap/4.0.0-alpha.5/css/bootstrap.min.css"
integrity="sha384-AysaV+vQoT3kOAXZk102PThvDr8HYKPZhNT5h/CXfBThSRXQ6jW5D02ekP5ViFdi"
crossorigin="anonymous">

  </head>

  <body>

    <div class="container">
      <br>

      <center><h2><b>Add Your College Information</b></center>
      <br>

      <form action="insert_college.php" method="post">

        <div class="form-group">

          <div class="row">
            <label class="col-sm-2"for="cname">College Name</label>
            <div class="col-sm-10">
              <input type="text" class="form-control" id="cname" name="c_name"
placeholder="Enter College or University name" required>
            </div>
          </div>

          </div>

        </div>

        <div class="form-group">

          <div class="row">
            <label class="col-sm-2"for="clinke">College Link</label>
            <div class="col-sm-10">
              <input type="text" class="form-control" id="clink" name="c_link"
placeholder="Enter College or University link" required>
            </div>
          </div>

          </div>

        </div>

        <div class="form-group">

          <div class="row">
            <label class="col-sm-2"for="sscore">GPA</label>
            <div class="col-sm-10">
              <input type="text" class="form-control" id="cgpa" name="c_gpa"
placeholder="Enter GPA required" required>
            </div>
          </div>

          </div>

        </div>

      </div>
    </body>
  </html>
```

```

<div class="form-group">

  <div class="row">
    <label class="col-sm-2"for="sscore">SAT Score</label>
    <div class="col-sm-10">
      <input type="text" class="form-control" id="sscore" name="s_score"
        placeholder="Enter SAT score required"required>

    </div>
  </div>

</div>

<div class="form-group">

  <div class="row">
    <label class="col-sm-2"for="ascore">ACT Score</label>
    <div class="col-sm-10">
      <input type="text" class="form-control" id="ascore" name="a_score"
        placeholder="Enter ACT score required"required>

    </div>
  </div>

</div>

<div class="form-group">

  <div class="row">
    <label class="col-sm-2"for="state">State</label>
    <div class="col-sm-10">
      <input type="text" class="form-control" id="state" name="s_state"
        placeholder="Enter State"required>

    </div>
  </div>

</div>

<div class="form-group">

  <div class="row">
    <label class="col-sm-2"for="zip"> ZIP Code</label>
    <div class="col-sm-10">
      <input type="text" class="form-control" id="zip" name="s_zip"
        placeholder="Enter ZIP code"required>

    </div>
  </div>

</div>

<div class="form-group">

  <div class="row">
    <label class="col-sm-2"for="state">Additional Information</label>
    <div class="col-sm-10">
      <textarea class="form-control" id="ainformation" name="a_information"
        placeholder="Enter additional information required for admission"
      "></textarea>

```

STUDENTS CENTER | Md Faisal Akbar | Nandita Dev | Ruhul Amin

```
$rs=mysql_query($sql);

if($rs)

echo "<script> alert('Your College Information uploaded
successfully.')

??

```

We did the similar coding to add information's to the Mysql database for upcoming graduate students and adding counselor's information's.

4.1.2 Fetch Data from MySQL database

File-1 name: fetch.php

```
<?php
$connect = mysqli_connect("localhost","databasename","password","databasename");
$output = '';
$sql = "SELECT * FROM tablename WHERE college_name LIKE '%" . $_POST["search"] . "%'

OR sat_score LIKE '%" . $_POST['search'] . "%'

OR act_score LIKE '%" . $_POST['search'] . "%'
OR state LIKE '%" . $_POST['search'] . "%'
OR s_zip LIKE '%" . $_POST['search'] . "%'";

$result = mysqli_query($connect, $sql);
if(mysqli_num_rows($result) > 0)
{
    $output .= '<h4 align="center">Search Result</h4>';
    $output .= '<div class="table-responsive">

```

We did the similar coding to fetch the information's from database for upcoming graduate students and to find the Counselor's information's.

5. Big Data and Students Center

Inevitably there are a radical relation between big data and Students Center project. We have noticed that over time social networking has been moved from in-person to online. Big data can help us to trace student to student interactions as well as interaction between our online service with students, counselor and parents. If we can trace how students are using their information to find suitable colleges for them, then by integrating these and other source of data we can suggest colleges, universities and counselor information precisely.

There are total 4,726 institutions in the USA. Of these 3,026 are four-year institutions and 1,700 two-year institutions in the USA. Of these, 1,623 schools are public and 3,103 are private; of the private schools, 1,451 are for-profit. There are 3,275 nonprofit public and private institutions of higher learning in the United States. In fall 2014, total undergraduate enrollment in degree-granting postsecondary institutions was 17.3 million students, an increase of 31 percent from 2000, when enrollment was 13.2 million students. Undergraduate enrollment is projected to increase 14 percent from 17.3 million to 19.8 million students between 2014 and 2025 [8].

To support 17.3 million to 19.8 million upcoming undergraduate students integrating and updating all the college and university information time to time is challenging. Fulfilling this promise requires to analyze a big amount of complex data. If students center team can able to collect series of data with time, then in future it would be possible to analyze those structured and unstructured complex data and hopefully we will be able to radically change the educational system.

There are many other connection between Students Center project and Big data. Counselor information, Support students, Students forum, up to date test and exam information, ecommerce, tutorials, survey, eBooks all of these involve with data and data is growing rapidly with time.

We would like to conclude saying that, big data is only going to get bigger, and those companies that disregard it will be left further and further behind.

Review done by: Team 2

Thank you for the chance to review your materials.

1. Relevance: A large section of any SSC are students, therefore the topic is very relevant.
2. Target Community: As students ourselves, it is not difficult to see the benefit of having a student center as you have proposed for your project. From the information that was provided, it is clear that the database is going to be a reliable source of information for the students.
3. Overarching dimension of SSC: Society/ Education
4. Physical and Service Infrastructure: Higher level education
5. Number & Relevance of Used Cases: N/A (no detailed explanation and use cases provided)
Students Center Response: We updated use cases in this documents as well as in our active website.
6. Definitions of the subjects and actors in used cases: N/A (no detailed explanation and use cases provided)
Students Center Response: Explained details in this documents.
7. Match between use cases and interfaces: N/A (no detailed explanation and use cases provided)
Students Center Response: Provided detailed explanation in this documents.
8. Overall style and presentation: An issue that might arise in the future is the design of the student portal. Perhaps a more interactive as well as visually pleasing and more user friendly interface can be used for the portal so that it can attract more users, particularly the less tech savvy ones. Nonetheless, the topic is a very relevant one that has immense potential to be very effective for the students. However, the presentation is not self-explanatory. It is almost assumed that someone else will be demonstrating the portal/application.
9. Other suggestions: The only pitfall of such a project is the need for a constantly updated and fully functional database. The project will only be optimally useful if the database contains all the relevant and updated information. To keep it that way for the students on a day to day basis will require considerable manpower and economic resources, which might make the entire project less feasible. One way to avoid that problem would be to partner with one of the major student information databases, such as Monster.com and Fastweb.com. The partnership will benefit both the project as well as these private databases who will be given immense publicity through these student portals.
Also, a detailed documentation on the project will help to understand or break down the project into different sections for better user friendliness as well as the development process.

Students Center Response: Now we made fully functional database in MySQL. Now Colleges as well as counselor can add their valuable information to our database. We explained detail about our MySQL database in this document.

“YAW Online Money”

Reviewed by Team – 03 (Md Faisal Akbar, Nandita Dev, Ruhul Amin)

1. **Concept:** Their concept were not clear. Is their service work as money transfer agency or they work for banks. Please make clear concept how YAW apps work. For suggestions, this apps could work with any bank or credit card company as a partnership basis, like Xoom paypal agency, square cash, TransferWise.
2. **Incomplete Interface:** Some feature can be added such as:
History Button: To access previous transaction (both deposits and transferred)
Cancel Transaction: Suppose someone want to cancel his/her recent transaction. A button can be added to cancel the transaction. Customer can cancel transaction within one days or few hours.
Transfer Option: Customer can Transfer their saving money to bank account.
Account Type: You can add different account type: free, standard, premium.
ID Number: Phone number or email can be added as ID number. So that customer can easily find out others account number for transaction.
Customer Service Button: There should be a button for customer service contact.
Check Deposits: There could be an option to deposits check.
3. **Security** : As a agency, there has lot of security issue – how secure to make mobile deposit, save money and cash out. They should add some confidential questions when anyone make transactions in online. Like date of birth, birth place, mother’s or father’s name etc.
4. **Customer Service:** If anyone try to fail make online transaction, how customer service helps their customer. Please add some hotline contact number services 24/7 for emergency. And add email service for non emergency.
5. **Transaction Fees:** Doesn’t notify any transaction fee. Pleas make a range how much is the fee \$1 - \$500 , \$501 - \$1000 etc in the apps.
6. **GPS Service:** If this apps use GPS service to track location who send money or receive money, then it would be more secure.
7. **Local/ International:** Could people use this apps for international online money transfer or only for USA or both ? If international or both transaction ,how this apps works for outside in USA, please make clear concepts.
8. **Cash Out:** How customer can cash out their money is not clear. For example, people use ATM anytime for cash out their money from bank account.
9. There could be an option like Apple Pay so that people can use their money via NFC.

CONCLUSION

We think the project falls in Lack of intelligible presentation category. Though the Crime stoppers team covers major items, but there is room to cause erroneous interpretations.

This Mobile application will be mostly for emergency situation as well as for non-emergency situation, so we think the use cases should be more user friendly and use cases should be designed in such a way that people can request help as soon as they can and they can provide much information without compromising time.
